

## Case Study

**Site:** Hayes Country Club

Set within 6.5 acres of formal grounds, Burton Pynsent House offers 8 unbelievable apartments with exceptionally spacious accommodation plus balconies

**Remit:** To provide spatial heating and hot water to each apartment via a metered community heating system.

**Challenges:** The geological layout of the area designated for the ground array needed careful consideration in terms of design to maximise energy absorption.

Providing individual energy readings for each apartment

**Solution:** The area designated for the ground array was excavated to lay the collectors in the most efficient manner. The entire area was backfilled and landscaped.

Kamstrup heat meters installed to measure the temperature and flow of each individual system
